

ICD-10

MicroMD PM + EMR Version 10 and above

We're committed to improving ease of use and helping our clients with a smooth ICD-10 transition. While PM and EMR software is a small part of what practices need to upgrade/update to prepare for the October 1, 2015 transition deadline, it's critical to ensure you have the tools and resources that support ICD-10 functionality for your administrative, billing and clinical workflows. We launched MicroMD PM + EMR Version 10 in December 2014 to provide clients with plenty of time to upgrade and plan transition tasks related to the MicroMD software.

While it is important to get ICD-10 functionality to get into the hands of users, we continue to focus on improving usability through the introduction of enhancements and new functionality to manage evolving workflows and requirements. Version 10 also includes a number of client-requested usability enhancements.

As we continue to focus on ways to allow practices and providers to get back to the business of healing, we invite you to explore the new Version 10 functionality.

PM + EMR Core ICD-10 Functionality

- Optum MapSelects 2015 codes, descriptions and mapping files – 50% more one-to-one and one-to-many code matches than GEMs files
- Identify unmapped codes with reporting and application indicators allowing for code updates on-the-fly
- Enhanced AND/OR search functions to quickly identify specific codes and view descriptions in key areas requiring ICD-10 codes
- Built-in ICD-10 code switch automates the transition to transmit ICD-10 codes on the October 1, 2015 deadline
- Choose to display and print ICD-9 or ICD-10 codes throughout the applications
- View one-to-many code matches and descriptions to assist in code mapping

ICD-10 SUPPORT TOOLS

- ICD-10 Educational Series: Web, in-person or video recordings
- Software training and code mapping tools: Video and web
- Dedicated Upgrade Specialist
- US-based ICD-10 support
- Consulting resources
